

## SECOND INTERNATIONAL NANOTECHNOLOGY CONFERENCE ON COMMUNICATIONS AND COOPERATION

### **Abstract**

#### **Nano materials at Showa Denko**

By Jun Ogawa, *Showa Denko K.K*

Showa Denko is one of the leading companies in the field of nano materials manufacture, such as Titanium di-oxide and Carbon nano tubes.

As for the carbon nano tubes, although there are currently many announcements about new project of the production, Showa Denko has an activity already over 20 years and many secondary battery manufacturers have been using our carbon nano tubes. Secondary battery, such as Lithium ion battery market is expected to be expanding quickly and batteries are requested to be more efficient. Our carbon nano tubes have come to be one of the key materials to improve batteries performance and we expect further growth.

The latest topics and trend with regard to carbon nano tubes and batteries will be talked and discussed.
